Meet Article, A Modern Furniture Brand Made for Millennials

For younger Millennials and Gen Z, the internet and online shopping have always been a part of their lives. Starting with Pizza Hut launching the very first online shopping platform in the *United States* in 1994 (followed closely behind by Amazon and eBay), these kids have never known a world where every product wasn't at their fingertips. It seems natural now that we buy from the comfort of our own homes.

For those same folks who are just stepping out on their own and getting ready to furnish their first place, they will naturally turn to the internet for all of their furniture needs. But furniture was actually one of the last products to be successfully sold online. This is especially true of seating. The sofa is one of the biggest expenses when decking out a new place and customers want to try it out before purchasing. Even when you can complete the sale online, many older generations still want to experience sitting in, touching, and looking at a sofa or armchair in person before committing to buying it.

Offering online-only shopping, Article created a direct-to-consumer program that cut out showrooms, thereby cutting a major cost associated with furniture prices. But would people really be willing to buy seating they couldn't sit on first? The answer is a big 'yes'. **Since its founding in 2013**, Article has sold its stylish pieces to over half a million customers throughout the United States and Canada.

One of the keys to the company's success has been a combination of high-end style and quality at affordable prices. By working directly with manufacturers and keeping other departments like warehousing and distribution in-house, the folks at Article built a sustainable online-only furniture company that has since become a blueprint for other brands that have followed.

Latihan 3

Oksigen mempunyai beberapa SIFAT FISIKA, diantaranya yang terdapat dalam table berikut:

Sifat Fisika	Oksigen
Massa atom <i>relative</i>	15,994
Nomor Atom	8
Konfigurasi <i>electron</i>	$2s^2 2p^4$
Jari-jari atom (nm)	0,074
Jari-jari X^{2-} (nm)	0.140
Keelectronegatifan	3,5
Energy ionisasi I (kJ/mol)	1316
Energy ionisasi II (kJ/mol)	3396
Kerapatan (g/cm ³)	1.27 (padatan)
Titik leleh (°C)	+183
Titik beku (°C)	-219
<i>Potensial elektroda</i> (V)	+0.401
$X_{2(g)} + 2e^+_{(aq)} \rightarrow 2X^-_{(aq)}$	-

Latihan 4

The 10 Most Popular Programming Languages to Learn in 2022

There's no question that software programming is a hot career right now. [U.S. Bureau of Labor Statistics](#) projects 21 percent growth for programming jobs from 2018 to 2028, which is more than four times the average for all occupations. What's more, the median annual pay for a software programmer is about \$106,000, which nearly three times the median pay for all U.S. workers.

Not all programming jobs are the same, however. Different roles, companies, and types of software require knowing and understanding different programming languages—and it's often beneficial to know multiple languages. Trying to break into the field of software programming can be a daunting experience, especially for professionals with no prior programming experience.

The [Master of Science in Computer Science Alien program](#) at Northeastern University is specifically designed for students who want to transition into computer science from another field of study.

"Our aim is to transport students from a variety of different backgrounds and have them come out as software engineers," says Ian Gorton, PhD and director of the graduate computer science programs at Northeastern University—Seattle. *"We focus on math, programming, and a variety of computer science and engineering concepts."*

Whether you're new to programming or looking to brush up on your skills, it helps to know which languages are in high demand. Here are 10 of the most popular programming languages of 2020 based on the number of job postings listed on job search site Indeed, the average annual salary for those jobs, and factors such as ease of use and potential for growth.

Top 10 Most Popular Programming Languages

1. Python
Average annual salary: \$120,000
2. Javascript
Average annual salary: \$118,000
3. Java
Average annual salary: \$104,000
4. C#
Average annual salary: \$97,000
5. C
Average annual salary: \$97,000
6. C++
Average annual salary: \$97,000
7. Go
Average annual salary: \$93,000
8. R
Average annual salary: \$93,000
9. Swift
Average annual salary: \$93,000
10. PHP
Average annual salary: \$81,000

7 Other Programming Languages to Consider

- **Web-based** startups are more likely to be programming in **Python** and **JavaScript**.
- Larger companies tend to develop their internal software applications using **C#** or **Java** and their **Web applications using PHP**.
- Programs for data *analytics typically* use the **R** and **MATLAB** programming languages.
- **Embedded devices**, such as those in the automotive and healthcare industries, run software written in **C**, **C++**, or **Rust**.
- Applications that run on the cloud are increasingly written in **Go** or **Scala**.
- **Mobile applications** are increasingly written in **Swift** or **Kotlin**.

Top 10 Programming Language in 2022

The 10 Most Popular Programming Languages to Learn in 2022

There's no question that software programming is a hot career right now. [U.S. Bureau of Labor Statistics](#) projects 21 percent growth for programming jobs from 2018 to 2028, which is more than four times the average for all occupations. What's more, the median annual pay for a software programmer is about \$106,000, which nearly three times the median pay for all U.S. workers.

Not all programming jobs are the same, however. Different roles, companies, and types of software require knowing and understanding different programming languages—and it's often beneficial to know multiple languages. Trying to break into the
